

Deepki Acquires Camion to Bring Purpose-Built Agentic AI to Real Estate

The combination of Deepki's market-leading real estate data and Camion's agentic AI helps owners increase portfolio value and capitalize on the \$7 trillion electrification opportunity

LONDON, UK - July 30th – Deepki, the market-leading SaaS platform in real estate, announced today the acquisition of UK-based Camion, a pioneer in agentic AI for Real Estate. This strategic combination of Camion's AI and expertise with Deepki's platform and proprietary data significantly enhances the company's ability to serve its global client base by delivering unparalleled intelligence to future-proof real estate portfolios with electrification, energy generation and storage. By merging these capabilities, Deepki helps customers identify the highest-value investments, reduce energy costs, and secure access to power - enabling them to maximize portfolio value, mitigate risk, and build more resilient real estate portfolios.

The global transition to electrification represents a massive \$7 trillion investment opportunity. With 66% of all new global energy demand projected to be electric by 2050 ([BloombergNEF](#)), the competitive advantage belongs to real estate owners who know how to act fast. By integrating Camion's domain expertise in electrification, Deepki helps owners prioritize capital with confidence to accelerate returns—including up to a 40% increase in site Net Operating Income (NOI) through optimized upgrades and 90% faster underwriting for new energy assets.

Artificial intelligence is unlocking powerful new opportunities for real estate owners. With Deepki, AI achieves its full potential thanks to the industry's highest data quality and most comprehensive data layer. At the heart of this acquisition is the integration of Deepki's market-leading proprietary data layer of 500,000+ assets in 95 countries with Camion's agentic AI, and world-class expertise. The combined technology is creating a differentiated solution that helps customers make faster, smarter decisions across their portfolios. Deepki and Camion are already delivering these high-value outcomes today with leading global real estate companies.

Vincent Bryant, CEO and Co-founder at Deepki:

"This acquisition represents a transformative milestone dedicated entirely to empowering our clients. By uniting Camion's proven electrification models with our dedicated AI Lab, we inject an immediate technical edge that provides institutional investors with an always-on, AI-driven platform to protect Gross Asset Value and secure long-term value across their global portfolios. To drive this next chapter, I am thrilled to welcome Camion's world-class team of AI, data science and real estate experts - who bring elite pedigree from pioneers like Tesla and Palantir - to Deepki."

Jacob Monroe, CEO and Co-founder at Camion Energy:

"Camion was founded on the belief that institutional real estate portfolios hold among the greatest opportunities for the ROI-positive deployment of zero-marginal cost energy. By combining our

domain-specific agentic AI platform, Deepki's proprietary data layer of 500,000+ assets, and their customer base made up of the most sophisticated asset managers in the world, we believe we can accelerate the transition to clean energy abundance and hasten the allocation of the \$7 trillion that will be invested in electrification in the coming decades."

Strengthening Global Scale and Customer Impact

Marking Deepki's fourth strategic acquisition since its founding in 2014, Camion brings a proven track record of serving elite global players and institutional investors in the UK and US markets. This deep geographic and technical expertise will seamlessly integrate into Deepki's footprint spanning four continents, offering clients localized market insights backed by global scale.

The acquisition ensures complete business continuity with zero operational friction; existing Camion customers will maintain uninterrupted access to their core teams and technologies. Concurrently, Deepki's global network of over 600 clients will have the option to access these advanced AI capabilities, enabling asset managers and owners to rapidly translate sustainability commitments into measurable financial and environmental performance - delivering greater impact for our customers' bottom line and for the planet.

About Deepki

[Deepki](#), the market-leading SaaS platform in real estate, enables owners, investors, and occupants to manage risk through data-driven insights, improve the sustainability and financial performance of their assets, and meet growing regulatory requirements. Deepki holds both ISAE 3000 Type II and SOC 2 Type II reports, guaranteeing the security, credibility, and accuracy of its data, making it fully auditable to the same high-quality standards as financial reporting. The company currently supports over 600 customers, monitoring the sustainability performance of over €4 trillion in real estate assets under management (AUM) across 95+ countries. Employing over 400 people, Deepki helps global clients—including Generali Real Estate, PGIM, and SwissLife Asset Managers—transition buildings towards sustainability and improve performance across more than 60 asset types.
